

Second Delivery

- Requirements table

	Requirement	Description
1	Alarm for feeding the fish	Our device will include an alarm clock that the user can set to sound in an exact time of the day. This feature will let the user ti remember to feed
2	Alarm for cleaning the tank	The user can use this feature to set an alarm in a specific period of time. Imagine you know you have to clean your fish tank every 3 weeks, so you have to calculate which day of the month you have to clean it. With our product, you won't need to do this again, because this will calculate at what day of the month you have to clean the fish tank.
3	automatic Food dispenser	If you are in another country or you can make it to feed you fish, our product will help you with this simple task. Aqua intelligence has a automatic food dispenser that will give food to your fishes at a certain hour of the day. This our can be set by the user, or the user can access the manual dispense so they can feed their fishes.
4	Camera	Aqua intelligence also has a camera, so the user can see their fishes
5	Log in	The app and website of aqua intelligence will need the user to create and account. This will create a more unique experience for the user and the fishes.
6	Number of fish tanks	After the user create his account ad log in he can tell the app how many fish tanks he has and if the maintenance is the same for all the tanks he can copy and paste the alarmas and food dispenser for every tank he has.
7	Temperature	The device will be able to regulate the temperature of the fish tank. This will allow the fishes of your tank to not suffer the consequences of global warming.
